Project Overview

Project Name: MicroGoals
Project Description: A Node.js and Express-based backend API that allows users to register, log in securely using JWT authentication, and manage personal goals through CRUD operations. The system ensures secure route protection, centralized error handling, and structured data storage using MongoDB.
Project Version: v1.0

Testing Scope

Features and Functionalities to be Tested

User Registration
User Login with JWT Authentication
Create Goal API
View User-Specific Goals
Update Goal API
Delete Goal API
Auth Middleware (Protected Routes)
Error Handling Middleware
API Response Time & Status Codes

🔹 User Stories or Requirements to be Tested

Registering a new user account
Logging in and receiving a valid JWT token
Creating a goal successfully
Viewing only authenticated user goals

Updating an existing goal
Deleting a goal
Preventing unauthorized access (401 error)
Handling invalid input or server errors gracefully

Test Cases:-

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	1. Send POST request to `/register` 2. Provide valid data	User should be created successfully with 201 status	User created successfully	Pass
TC-002	User Login	1. Send POST request to `/login` 2. Provide valid credentials	JWT token should be returned with 200 status	Token generated	Pass
TC-003	Create Goal	1. Send POST request to `/goals` 2. Provide valid token	Goal should be stored in database	Goal created	Pass

TC-004	Get Goals	1. Send GET request to `/goals` 2. Provide valid token	Only user-specific goals should be displayed	Goals retrieved	Pass
TC-005	Update Goal	1. Send PUT request with goal ID 2. Provide updated data	Goal should update successfully	Goal updated	Pass
TC-006	Delete Goal	1. Send DELETE request with goal ID	Goal should be removed permanently	Goal deleted	Pass
TC-007	Unauthorized Access	1. Access protected route without token	System should return 401 Unauthorized	401 returned	Pass
TC-008	Invalid Input	1. Send request with missing fields	Proper error message with 400 status	Error message returned	Pass

Notes

- Testing includes both positive and negative scenarios.
- All protected routes verified using JWT token.
- Proper HTTP status codes validated (200, 201, 400, 401, 404, 500).
- Final verification completed before deployment.
